

PRACTICA CALIFICADA N° 3

Profesor: **Farfán Jaime, MSc.**

Fecha: .. / . / ..

Apellidos: **Pretel Rojas**

Nombres: Yoliño

Carrera: Ing. Mecatronica

Ciclo: 7mo

Duración: 120 min

Número de preguntas: 1

Nota:

Indicaciones:

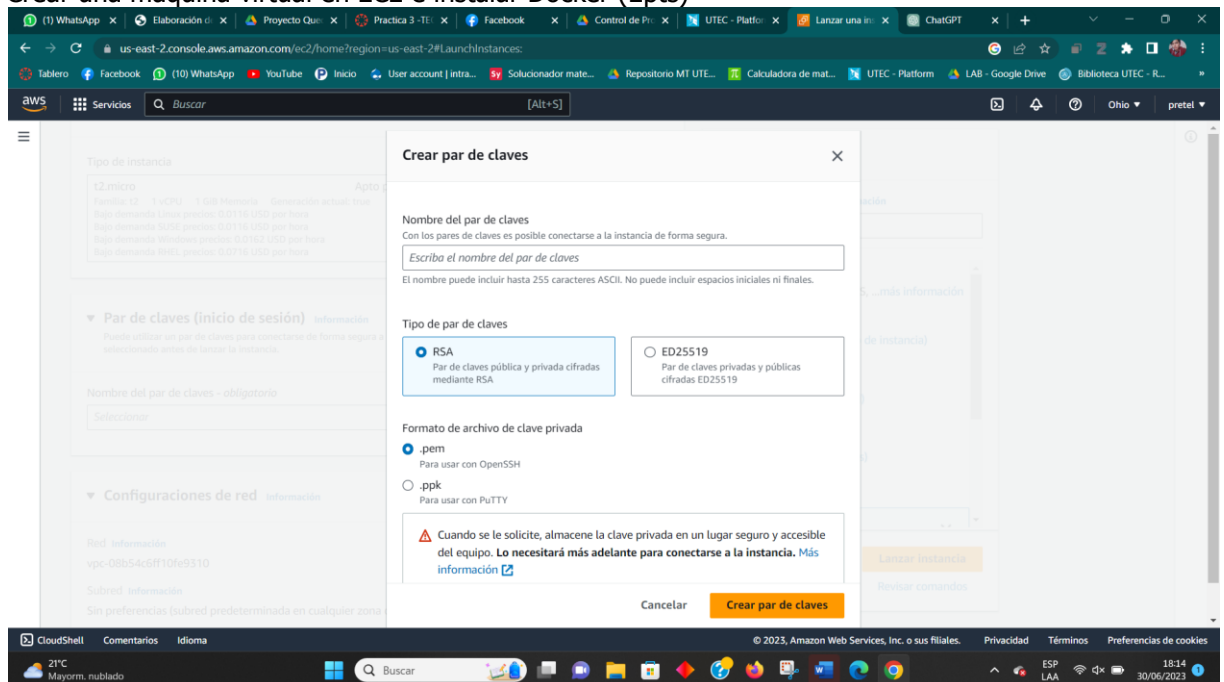

1. Se permite el uso de textos, apuntes y acceso a Internet. ☺

Del siguiente caso realizar las siguientes actividades

Entregables

- Evidencia del funcionamiento de cada pregunta (captura de pantalla)
- Zip del código de su fuente

1) Crear una máquina virtual en EC2 e instalar Docker (2pts)

The screenshot shows the AWS Management Console interface for launching an EC2 instance. The top navigation bar includes the AWS logo and a search bar. The main content area is titled 'EC2 > Instancias > Lanzar una instancia'. A green success message indicates that the instance launch was successful. Below this, the 'Pasos siguientes' (Next steps) section provides guidance on three key tasks: setting up billing alerts, connecting to the instance, and connecting to an RDS database. Each task is accompanied by a brief description and a button to perform the action.

Correcto
El lanzamiento de la instancia se inició correctamente (i-075079e06a34964d2)

► Registro de lanzamiento

Pasos siguientes

Crear alertas de uso del nivel gratuito y facturación

Para administrar los costos y evitar facturas sorpresa, configure las notificaciones por correo electrónico para los umbrales de uso del nivel gratuito y facturación.

Crear alertas de facturación

Conectarse a la instancia

Una vez que la instancia esté en ejecución, inicie sesión en ella desde el equipo local.

Conectarse a la instancia

Más información

Conectar una base de datos de RDS

Configure la conexión entre una instancia de EC2 y una base de datos para permitir el flujo de tráfico entre ellas.

Conectar una base de datos de RDS

Crear una nueva base de datos de RDS

Running kernel seems to be up-to-date.

No services need to be restarted.

No containers need to be restarted.

No user sessions are running outdated binaries.

No VM guests are running outdated hypervisor (qemu) binaries on this host.

- 3) Crear una aplicación en PYTHON-FLASK que permita realizar LOGIN/REGISTRO. (8pts)

The screenshot shows a web browser window with the address bar displaying '127.0.0.1:3000/login/'. The page has a blue header with the text 'Inicio', 'login', and 'create usuario'. Below the header, there is a form titled 'ingresar datos' with four input fields: 'username', 'nombre', 'apellido', and 'clave'. Each field has a corresponding label to its left. At the bottom of the form, there are two buttons: 'Cancel' and 'Save'. The browser's address bar shows several tabs, including 'Tablero', 'Facebook', '(10) WhatsApp', 'YouTube', 'Inicio', 'Booked Scheduler ~...', 'Google Académico', 'User account | intra...', 'Solucionador mate...', 'Gradescope', 'Repositorio MT UTE...', and 'Otros favoritos'. The Windows taskbar at the bottom shows the date and time as '20:45 30/06/2023' and the temperature as '20°C Nublado'.

Version 0.1

```
